1. For my Ph. D. degree, I have worked on Nuclear Structure (Theory) with title:

   Thesis Title: **Triaxial Projected Shell Model Study of Transitional Nuclei**

   Ph. D. Supervisor: **Prof. Sheikh Javid Ahmad.**

3. **Research Summary :**

During the last decade, research in nuclear theory has witnessed a discernable progress in the development of state-of-the-art models and techniques to elucidate the rich variety of shapes and structures in nuclei. There is a great optimism that in the coming years it should be possible to apply *Ab-initio* methods of Green's function , shell model and density functional theory, to investigate majority of the properties all across the nuclear periodic table with the availability of more powerful computing facilities. However, at the moment these methods have limited applicability and are used to describe nuclei in lighter mass regions or ground-state properties only. To study, for instance, the rich band structures observed in medium and heavy mass regions, alternative methods with moderate computational requirements ought to be explored.

Recently, TPSM approach has been developed to describe the rich band structures observed in well deformed and transitional nuclei. This model employs the basis that are solutions of the triaxial Nilsson potential and then three dimensional projection is performed to project out the states with well defined angular momentum quantum number. The advantage of this approach is that systematic studies of a large class of nuclei can be performed with a minimal computational effort. As a matter of fact, already a number of systematic investigations have been undertaken using this model and it has been demonstrated to reproduce the known experimental data remarkably well. This model has been applied to investigate a broad range of properties related to the triaxial degree of freedom of the nuclear deformation.

The basic strategy of the TPSM approach is similar to the spherical shell model model (SSM) with the only difference that deformed basis are employed for diagonalizing the shell model Hamiltonian rather than the spherical one. The deformed basis are constructed by solving the triaxial Nilsson potential with optimum quadrupole deformation parameters of ϵ and ϵ'. In principle, the deformed basis can be constructed with arbitrary deformation parameters, however, the basis are constructed with expected or known deformation parameters (so called optimum) for a given system under consideration. These deformation values lead to an accurate Fermi surface and it is possible to choose a minimal subset of the basis states around the Fermi surface for a realistic description of a given system. The Nilsson basis states are then transformed to the quasiparticle space using the simple Bardeen-Cooper-Schriefer (BCS) ansatz for treating the pairing interaction. As the deformed basis are defined in the intrinsic frame of reference and don't have well defined angular-momentum, in the second stage these basis are projected onto states with well defined angular-momentum using the angular-momentum projection technique. In the third and the final stage of the TPSM analysis, the projected basis are employed to diagonalize the shell model Hamiltonian.

G. H. Bhat, J. A. Sheikh, Y. Sun, and R. Palit
Proceedings of the DAE Symp. on Nucl. Phys. **58** (2013)

42. *Triaxial projected shell model study of $^{178-186}W$ nuclei*
G. H. Bhat, J. A. Sheikh, R. N. Ali, W. A. Dar, P. A. Ganai, S. Jehangir, and P. Javid
Proceedings of the DAE Symp. on Nucl. Phys. **58** (2013)

43. *Triaxial projected shell model study of ^{109}Tc nucleus*
W. A. Dar, R. N. Ali, S. Jehangir, P. Javid, P. A. Ganai, **G. H. Bhat** and J. A. Sheikh
Proceedings of the DAE Symp. on Nucl. Phys. **58** (2013)

44. *Systematic study of transition probabilities in $^{182-190}Pt$ isotopes*
G. H. Bhat, J. A. Sheikh, and P. A. Ganai
Nuclear Structure 2012, Book of abstracts, August 13-17 2012, Argonne National Laboratory USA

45. *Quasiparticle band structures in transitional nuclei*
G. H. Bhat, J. A. Sheikh, P. A. Ganai, Yang Sun
Proceedings of the DAE Symp. on Nucl. Phys. **268**, 57 (2012)

46. *Multi-phonon gamma vibrational bands in odd-proton ^{107}Tc nucleus*
G. H. Bhat, W. A. Dar, J. A. Sheikh, P. A. Ganai
Proceedings of the DAE Symp. on Nucl. Phys. **266**, 57 (2012)

47. *Structure of ^{108}Ag at Low and Medium Spin*
J. Sethi, R. Palit, S. Saha, T. Trivedi, **G. H. Bhat**, J A. Sheikh et al
Proceedings of the DAE Symp. on Nucl. Phys. **288**, 57 (2012)

48. *Triaxial projected shell model study of γ-vibrational bands in odd-neutron ^{105}Mo nucleus*
G. H. Bhat, J. A. Sheikh, P. A. Ganai, R. Palit, and Y. Sun
Proceedings of the DAE Symp. on Nucl. Phys. **194**, 56 (2011)

49. *Study of chiral rotations in ^{126}Cs nucleus*
G. H. Bhat, J. A. Sheikh, R. Palit, and P. A. Gania
Proceedings of the DAE Symp. on Nucl. Phys. **238**, 56 (2011)

50. *Systematics of yrast-band transition probabilities for $^{158-166}Er$ isotopes*
G. H. Bhat, J. A. Sheikh, P. A. Ganai, and R. Palit,
Proceedings of the DAE Symp. on Nucl. Phys. **278**, 56 (2011)

51. *Triaxial projected shell model study of γ-vibrational bands in even-even Nd isotopes*
G. H. Bhat, J. A. Sheikh, R. Palit, Z. Naik and Y. Sun,
Published in proceeding of DAE Symposium on Nuclear Physics IIT Rookee (2008)

52. *Triaxial projected shell model study ^{134}Ce nucleus*
G. H. Bhat, J. A. Sheikh, Y. Sun, G. B. Vakil, and R. Palit,
Published in Proceedings of Fourth JK Congress (2008)

b. Workshops, Seminars, Symposia and Conferences attended:

1. "Microscopic Nuclear Structure Models and Methods: Chiral Symmetry, Wobbling Motion and γ-bands" *UGC Sponsored National Seminar on Growth Points in Physics*, Organised by Deptt. of Physics, University of Kashmir, Srinagar-190 006, from 21st-23rd Oct. 2017.

2. Wobbling Motion: From Symmetry to Dynamics, 12th JK Science Congress : Organised by University of Jammu(March, 2-4, 2017)

3. Chirality: From Symmetry to Dynamics, 12th JK Science Congress : Organised by University of Jammu(March, 2-4, 2017)

4. "Chirality Symmetry Breaking in Triaxial Nuclei" INTERNATIONAL CONFERENCE IN NUCLEAR PHYSICS WITH ENERGETIC HEAVY ION BEAMS,
Organised by Department of Physics, Panjab University, Chandigarh (March, 1518 2017).

5. "Training Workshop on Research Based Pedagogical Tools (RBPTs)",
Organized by IISER Mohali in Collaboration with British Council, (January, 22-25, 2017).

6. TPSM study of gamma-band structures in 160Dy nucleus, National Conference on
"Role of Maths and CS in Advancement of Physics" Organised by Deptt of Physics, Govt. Degree College, Kathua (February 26-27, 2016)

7. Effect of gamma-deformations in the description of the high spin band structures in the 106Mo nucleus, tional Conference on
"Emerging Challenges in Nuclear and Many-Body Physics" Organised by University of Jammu (November, 10-11,2014)

8. Workshop on Astronomical Techniques and Science with Virtual Observations, Organised by University of Kashmir in Collaboration with IUCAA, Pune (September, 23-16, 2013)

9. Workshop on Stellar Astrophysics: Organised by University of Kashmir in Collaboration with IUCAA, Pune (Octobar, 24-26, 2011)

10. 6th JK Science Congress : Organised by University of Kashmir (2010)

11. 4th JK Science Congress : Organised by University of Kashmir (2008)

BOOK/BOOK CHAPTER

1. Microscopic investigation of wobbling motion in atomic nuclei using the triaxial projected shell model approach
Book Chapter of

1st Edition
Chirality and Wobbling in Atomic Nuclei

5. a. **Ph. D. Supervisor: Privided theoretical inputs to the Ph D. thesis of**

1. Khursheed Ahmad Rather, NIT Srinagar (Ph.D. Co-supervisor.
2. S Jehangir Department of Physics, NIT srinagar
3. F Babra Dept of Nuclear and Atomic Physics
   Tata Institute of Fundamental Reseach
   Mumbai 400 005, India
4. Musangu, Brooks M < *brooks.m.musangu*.1@*vanderbilt.edu* >
   Graduate School of Vanderbilt University
   Nashville, Tennessee, United States
5. Jasmine Sethi
   Research Scholar
   Dept of Nuclear and Atomic Physics

b. **Presently providing theoretical expertise to**

1. Nazira Nazir
   Ph. D. Student
   Department of Physics
   University of Kashmir
2. Syed Peerzada Rouoof ¡sprouoofphysics27@gmail.com¿
   Department of Physics IUST Awantipora
3. Aaneeqa Bashir
   Ph D
   Department of Physics and Astronomical Sciences, Centre University Jammu

7. Awards and Achievements:

1. *Alburuj R. Rahman Prize: Best Ph. D. Thesis Award,*
   Sponsor:University of Kashmir in Collaboration with Ohio State University USA
   (2013)

2. *FeLLOW OF INDIAN PHYSICS ASSOCIATION, PHYSICS NEWS (ISSN : 0253-7583) Page 33, Vol. 50 No. 1, January-March 2020*

3. *Ist Prize: Best Oral Presentation on the Research Paper entitled "Wobbling Motion: From Symmetry to Dynamics"*
   Sponsor: University of Jammu, Jammu in Collaboration with JK State Science, Technology and Innovation Council *12th JK Science Congress (March, 2-4, 2017)*

8. Project Works:

1. "Noval Nuclear Structure Studies with Modern Theoretical Approaches" File No. CRG/2019/004960 (BP-2020-21-3860)
   Sanctioned by Science and Engineering Research Board (SERB)
   Total Cost: Rs. 3085896/- (Rs. Thirty Lakh Eighty Five Thousands Eight Hundred and Ninety Six only)

2. *To Remove the Infinities Between two Point Charged Particles in Quantum Electrodynamics. M. Sc. Project.*

3. *Symmetry-Projection in Mesoscopic Systems of Metallic Clusters and Atomic Nuclei. Sponsored by DST*

9. Specialization: a. M. Phill. Ph. D. :

1. Theoretical Nuclear Physics

Accademic Positions :

1. Dupty Proctor Cluster University Srinagar wide CUS order No. CUS/Proc/01/2022, Dated: 08/10/2022

2. Nodal officer Inter disciplinary Research Centre S. P. College Srinagar wide order No. SPC/1495, Dated: 09/09/22

Subjects Taught at PG/IG level:

1. Nuclear Physics

2. Mathematical Physics

3. Quantum Mechanics

4. Clasical and Quantum Electrodynamics

5. Quantum Field Theory
   Work Experience :

- Teaching Experience at Islamic University of Science and Technology, Year from 06-03-2009 to 31-12-2009 and also from 08-03-2010 to 04-05-2010.
- One Year Teaching Experience at Department of Physics, University of Kashmir, Srinagar, Year (2010).
- Presently Teaching PG/IG/UG at Dept. of Physics S. P. College Srinagar 190 006. from 2016 to till date

10. **Research Experience : Software:**

- I have worked on both Axially Symmatric Projected Shell Model and Triaxial Projected Shell Model.
- I am comfortable with Fortran 77 and Fortran 90.
- For plotting and analysis: xmgrace.

11. **Research Interests and Future research plan:** Within theoretical nuclear physics, my general interest are:

- Identification of chiral geometry in even-even and odd-mass nuclei.
- Decay from long-lived isomeric states.
- Wobbling motion observed in strongly deformed nuclei.
- The major drawback in the TPSM model is the uncertainity in the strength parameters of the schematic interaction. Therefore, in future studies, we are planning to adopt a recently developed mapping procedure to microscopically determine the strength parameters. In this new approach, the energy surfaces obtained from the schematic effective interaction with free strength parameters are optimized to reproduce the energy surfaces retrieved from a realistic density functional approach (DFT).
